

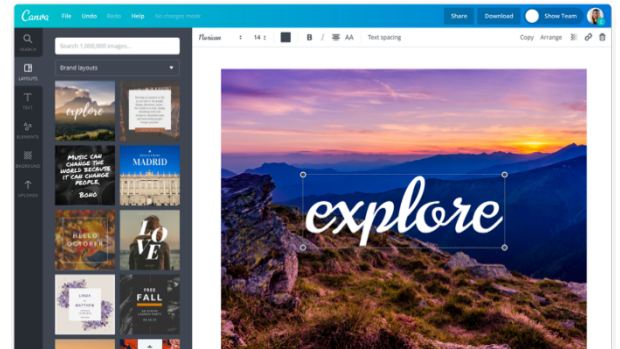

## Graphic Organizer

**Learning Target:** I can create a visual representation of my learning on physical transformation.

*The next number of lessons will each conclude with some time to work on a visual representation of key ideas from the class. This will give you a chance to reflect on the learning targets from each lesson. Your graphic organizer will later be printed as a poster to be shared with others in the class.*

### **Some Details:**

- You will need to add three pictures from each lesson, along with a short description for each picture (based off the learning targets for that class). One picture will represent your gratitude, one will represent a broken relationship, and one picture will represent the work World Vision is doing in regards to that lesson's topic.
- Each picture should be taken using a phone or camera. If these are not available, pictures can be pulled off the internet – but optimally the pictures will be from your own lives.
- The description should explain the picture's significance. How does it connect to gratitude, a broken relationship, or World Vision's work?
- As you work, think about the overall layout of your visual. Is there a way you can connect the layout to flourishing, physical transformation or something else from our learning expedition?
- When we finish, we will print our graphic organizers as posters to share with each other and display in our class.
